DETAILED ACTION

Response to Arguments

Applicant's arguments filed 9/27/04 have been fully considered but they are not persuasive. In reference to applicant's argument that the applied is directed to reducing the reactive power by using capacitors in parallel with the motor and the instant application is directed to reducing the reactive power by delaying power flow for a determined amount of time based on the measured reactive power, the claims are directed to controlling the power supplied to the motor. The applied prior art is directed to controlling the signals output to the motor by determining the reactive power in the input lines of the motor and controlling the timing of solid-state relays in order to control the quality of the power output to the motor. Therefore, the rejection of claims 1 and 2 will be maintained.

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-3 are rejected under 35 U.S.C. 102(b) as being anticipated by El-Sharkawi et al (US patent 5134356).

Claims 1 and 3, El-Sharkawi et al discloses a reactive power compensator comprising determining reactive power in the motor windings by using means 50, voltage detectors 54, current detectors 58, means 70; and maintaining a switch 114,

Art Unit: 2837

which is connected between a power supply and an inductive load in a non-conducting state based on the determined reactive voltage.

Claim 2, El-Sharkawi et al describe in the description of figure 13 how the state of the trigger switch would change from non-conductive to conductive based on the voltage across the output lines.

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The cited documents describe other systems/methods for controlling the power supply applied to an AC motor using reactive power measurements.

4. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Rina I Duda whose telephone number is 571-272-2062.

5. THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the mailing date of this final action.
